I can't believe how much plastic packaging is used at your store! It never used to be that way. Are you aware that plastics can be toxic and take thousands of years to degrade? They are based on petroleum products and contribute to disastrous global warming.

You have got to reduce the amount of plastics in your packaging and operations and encourage your suppliers to do the same. There are many other environmentally friendly alternatives.

I closely watch this sort of thing and do my business at sustainably inclined companies and I encourage my friends to do the same.

Sincerely,

City:
