Our planet is swimming in toxic discarded plastics, much of it from the US. Recycling, burial and disposal in third world countries is not the answer. Reduction in use IS the answer and you can help!

Please reduce the amount of plastics in your packaging and operations and encourage your suppliers to do the same. There are many other environmentally friendly alternatives available.

I, and my friends, closely watch this sort of thing and do business at environmentally inclined companies. I like your company and want to see it thrive in a sustainable way.

Sincerely,

City:
